RESEARCH BREADTH

Language, vision, signals, generative AI, and multi-agent systems.

INDUSTRY DEPTH

Automotive, public safety, finance, telecom, media, and document AI.

BUILDER-LEADER

Built teams, prototypes, papers, patents, and product-facing AI systems.

EDUCATION

- Postdoctoral Fellowship
Weizmann Institute of Science, 2013 - computer vision and ML
- Ph.D., Computer Science
Tel Aviv University, 2012 - ML and signal processing
- M.Sc., Technology Management
Polytechnic Institute of NYU, 2006
- M.Sc., Computer Science
Weizmann Institute of Science, 2004 - computer vision
- B.Sc., Computer Science
Technion, 1995

RECOGNITION & ACHIEVEMENTS

- AI Product of the Year recognition for SafeRide automotive AI product work.
- \$250K Citi LabLink grant for a financial data science collaboration platform.
- IIA innovation grants for Motorola Solutions industry-academia AI projects.
- \$10M hardware-cost savings contribution through model-based capacity planning at Amdocs.

INNOVATION & ENTREPRENEURSHIP

Founder / CTO experience across search, multimedia, cloud optimization, and applied AI ventures; corporate innovation through AI labs, grants, patents, and prototypes.

TEACHING & MENTORSHIP

Student supervision of graduate and undergraduate projects since 2012; developed and taught courses in ML, computer vision, LLMs, GenAI, and hands-on AI.

- AI researcher, builder, innovator, educator, and writer turning AI ideas into teams, systems, products, and publications.
- Over 30 years of industry experience, including roles as Head of AI Research, VP AI, and Head of Data Science; built and hired research, data science, and engineering teams; led cross-functional AI work.

LEADERSHIP & RESEARCH EXPERIENCE

Faculty Member - HIT, School of Computer Science 2024-Present

Conducts applied AI research and supervises student projects; teaches graduate AI courses at Bar-Ilan on LLMs, GenAI, and agents; created undergraduate Hands-On AI courses in LLMs and GenAI; served as Head of the Software Engineering track in 2024-2025.

Head of Data Science - Questar / SafeRide Technologies 2020-2024

Built and hired the data science team; led big-data AI for vehicle telematics across signal, audio, graph, anomaly detection, and onboard-model work; helped define a no-code product for onboard monitoring models.

VP of Artificial Intelligence - harmon.ie 2019-2020

Led cross-functional AI work for document management, including language processing and recommendation systems, connecting research direction with product and software execution.

Head of AI Research - Motorola Solutions, Israel Innovation Center 2015-2019

Built and led the research team at Motorola Solutions' first AI lab in the Innovation Center; designed the roadmap across video, text, speech, and public-safety AI.

AVP Data Science - Citi Israel Innovation Lab 2013-2015

Worked on financial time-series data science, anomaly detection, and trading-flow analytics.

Founder / CTO / R&D and algorithm leadership - SearchNG, CloudTuner, MPCode, Tegrity, AppiVision, Amdocs, Comverse, earlier roles 1991-2012

Founded ventures and led hands-on intelligent-system work in search, multimedia, video streaming, wireless communications, telecom, predictive modeling, handwriting recognition, imaging, inspection, and signal acquisition.

RESEARCH THEMES

- Pragmatic AI: methods for inference, generation, and coordination when clean benchmark assumptions do not hold.
- Robust AI
Vision, language, and signals under degraded or ambiguous inputs.
- Spec-driven GenAI
Generation of materials, text, images, and signals constrained by verifiable targets.
- Multi-agent AI
Evaluation and coordination without trusted benchmarks or shared state.

RESEARCH, PATENTS & SYSTEMS

- Publications
40+ Scholar-indexed works and 470+ citations across ML, computer vision, NLP, deep learning, and signal processing.
- Patents
10 patent records across vehicle diagnostics, driver monitoring, model configuration, onboard inference, public-safety audio, and search/image matching.
- Systems
Hands-on building of working systems in model integration, agent automation, runtime tracing, analytics, diffusion steering, evaluation, and reasoning platforms.
