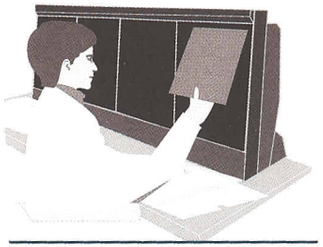
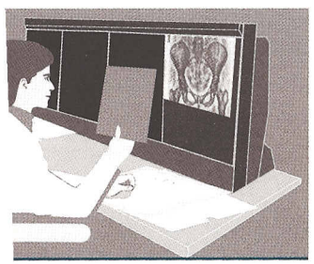
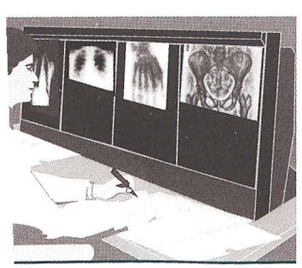
vzap-inand Read: Afully automatic system does all the rest



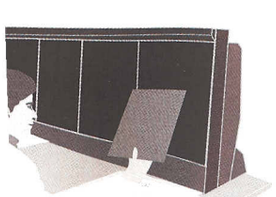
Jstician mounts film on dark 7te, exactly the same way as with a ltionallightbox. Room is fully ated.

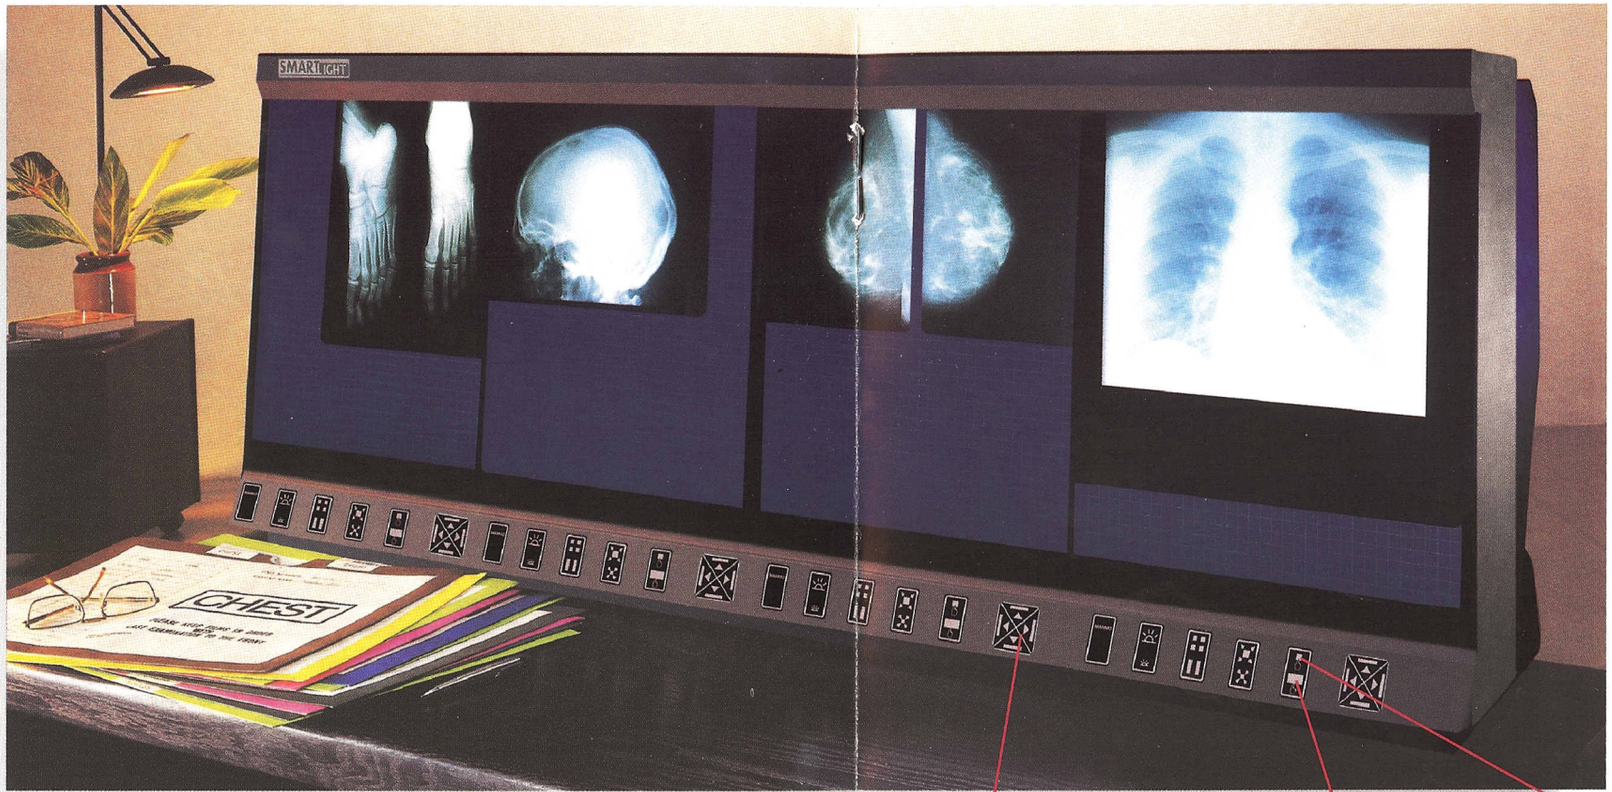


71 is snapped-in, image-carrying 7Sare instantly illuminated. light is automatically dimmed.



If the entire study, at optimal mditions.





Adaptive Seamless Glare Elimination

Automatic Adaptive Illumination

Ambient Light Control

Film Scatter Suppression

ACR MAM & 1995 German Guidelines

1996 EC Radiology & MQSA Rules

Automatic Image Optimization

Elimination of Visual Fatigue

TouchSpot™, LungVu™, SlotVu™ Features

Reduced Retakes

Enhanced Quality & Productivity

SmartLight Advantages

- Digital Film Viewer™ System
- Conventional Lightbox

Film interpretation is often carried out at breathtaking speed, under intense pressure with continual interruptions. Yeti utmost quality is required. SmartLight's highly sophisticated systems are designed to let you interpret films the same way as you always have - snap-in and read. All activities are carried out fully automatically. The SmartLight design team spared no effort and left no detail unaddressed. All sources of glare are automatically masked. Intensity and chromaticity of illumination are adapted to film density, and ambient :llumination is brought to optimal levels. Even the light emanating from the film is shaped to provide uniform light intensities in the direction of the viewer, while light from the adjacent panels is suppressed, further reducing qlare.
