Citi DataTube

Enterprise Data Insight Platform · Project Brief

LabLink

DESCRIPTION

A web portal for publishing, discovering, and collaborating on data insights and visualizations across the enterprise. DataTube brings the simplicity of video sharing to corporate data analytics.

PROBLEMS ADDRESSED

1. Data insights buried in email attachments and spreadsheets
2. Knowledge lost in scattered discussion threads
3. Limited collaboration across teams and departments
4. High cost and effort of ad-hoc report generation
5. Months-long time-to-value for data dissemination

KEY CAPABILITIES

Publish
Upload data, connect to warehouses and streams, auto-generate visuals.

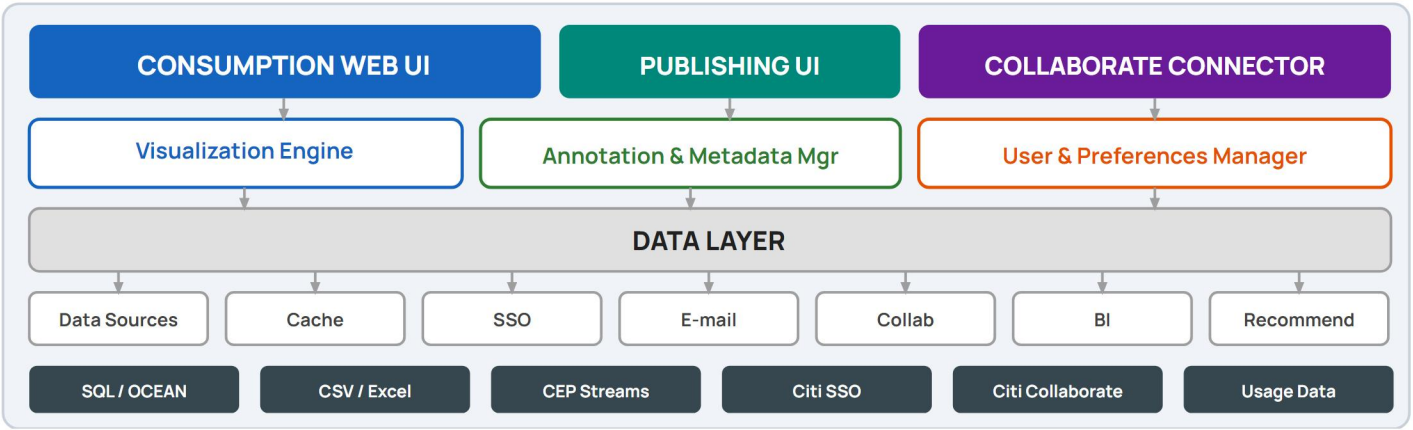
Discover
Search, browse, get personalized recommendations by role.

Collaborate
Discuss, annotate, share insights with preserved context.

Combine
Mix-and-match datasets into composite dashboards.

Govern
Enterprise access control, SSO, and compliance.

HIGH-LEVEL ARCHITECTURE



CORE TECHNOLOGY: GRAMMAR OF GRAPHICS

Analysts define *what* to show (data, aesthetics, geometry, scales) rather than *how* to draw it, producing flexible, composable visuals from any data source.

BENEFITS

Faster Decisions
Instant publishing reduces time-to-value from months to minutes.

Lower Costs
Self-service visuals eliminate ad-hoc report development and licensing.

Knowledge Retention
Discussions and annotations stay with the data, not in email.

Wider Reach
Any employee can discover and reuse insights across the organization.

Data-Driven Culture
Low-barrier access encourages evidence-based decisions at every level.
